BT082	PRO-Kinetic	Cobalth Chromium coronary stent system	8-40mm length 2-5mm diameter	\$1,200.00		
BT107	PRO-Kinetic Energy	The PRO-Kinetic Energy stent is a tubular, balloon-expandable stent sculpted by laser from a single tube of L-605 cobalt chromium (CoCr) alloy. The stent consists of circular segments at each end followed by a transition zone and helicoidally arranged struts in the middle. Each loop of the helix is connected to the next loop by 3 longitudinal struts. The stent surface is fully coated with a layer of amorphous hydrogen-rich silicon carbide (aSiC:H). This material has semiconducting properties that efficiently prevent the electron transfer from fibrinogen to the metal surface in vitro. Thereby the conversion from fibrinogen to fibrin and it's deposition at the stent surface is reduced. Additionally, aSiC:H - coated stents exhibit a lower adhesion and activation of blood platelets and leucocytes. Finally, the release of potentially allergenic ions from a silicon carbide coated stent is substantially reduced in comparison to an uncoated metal stent ³ . This coating is used on all Biotronik coronary stents produced so far and was subject to extensive clinical testing.	The PRO-Kinetic Energy stent is available in 66 different diameter/length combinations. It is available in lengths from 8mm to 40mm. It is premounted on a delivery system which has nominal balloon diameters between 2.0mm and 5.0mm.		\$1,248.00

GT223	W L Gore & Associates Helex 1.5 Septal Occluder	The GORE HELEX Septal Occluder consists of an implantable endoprosthesis and a catheter delivery system. The Occluder is comprised of a nickel-titanium (Nitinol) wire frame covered with expanded polytetrafluoroethylene (ePTFE). The ePTFE is treated with a hydrophilic coating to facilitate echocardiographic imaging of the Occluder during implantation. When fully deployed, the Occluder assumes a double disc configuration that bridges the septal defect to prevent shunting of blood between the right and left atria (Figure 1a, b). The delivery system consists of three distal co-axial components transitioning to a parallel component arrangement at the proximal Y-arm hub: a 10 Fr Green Delivery Catheter, a Gray Control Catheter and a Tan Mandrel (Figure 2). The proximal end of the Control Catheter exits the Y-arm hub and is terminated by a Red Retrieval Cord Cap. The proximal end of the Mandrel exits the side port of the Y-arm hub and is terminated by a Clear Leur. The Control Catheter is equipped with a retrieval cord if Occluder repositioning or retrieval is deemed necessary (Figure 2). A 0.035" guidewire channel is incorporated into the distal end of the Delivery Catheter.	Diameters: 15, 20, 25, 30 and 35mm		\$10,200.00

\$230.00	Reinforcement	Staple Line Reinforcement constitutes preformed porous bioabsorbable sheets held into the form of sleeves (one cartridge device, one anvil device) through the use of a non-absorbable polyester braided suture. A TYVEKR insert, which is removed and discarded after positioning on the stapler, is included to facilitate the placement of the device onto the jaws of the surgical staplers. After deployment of the stapler/reinforcement material combination, the non-absorbable suture component is removed and discarded. The implanted GORE SEAMGUARD Bioabsorbable Staple Line reinforcement is a porous fibrous structure composed solely of synthetic bioabsorbable poly (glycolide; trimethylene carbonate) copolymer. BX258	FloSeal Hemostatic Matrix	FloSeal is a proprietary combination of specially engineered collagen derived particles and topical thrombin. FlowSeal is not a sponge or a fibrin glue, rather it is a high viscosity gel for hemostasis. Clinically proven (refer Appendix 1; Section 2-4) to control bleeding from capillary oozing to arterial spurting, FloSeal functions on wet and actively bleeding tissues. FlowSeal Matrix consists of a bovine derived Gelatin Matrix component, a human derived Thrombin component, applicator tips and several mixing accessories. The Gelatin Matrix consists of crosslinked gelatin granules and is provided sterile and non-pyrogenic in a standard disposable syringe. The Thrombin (Human) is a sterile, non-pyrogenic, freeze-dried, vapour-heated powder preparation made from pooled human plasma. A sterile, non-pyrogenic calcium chloride solution is provided for reconstitution of the thrombin. After reconstitution, the resulting thrombin solution contains 500 IU/mL Thrombin (Human). FloSeal Matrix is the combination of the Gelatin Matrix component and the reconstituted Thrombin (Human) component. Thrombin must be added to the Gelatin Matrix component prior to use.		5mL,	\$700.00
