BT107	PRO-Kinetic Energy	The PRO-Kinetic Energy stent is a tubular, balloon-expandable stent sculpted by laser from a single tube of L-605 cobalt chromium (CoCr) alloy. The stent consists of circular segments at each end followed by a transition zone and helicoidally arranged struts in the middle. Each loop of the helix is connected to the next loop by 3 longitudinal struts. The stent surface is fully coated with a layer of amorphous hydrogen-rich silicon carbide (aSiC:H). This material has semiconducting properties that efficiently prevent the electron transfer from fibrinogen to the metal surface in vitro. Thereby the conversion from fibrinogen to fibrin and it's deposition at the stent surface is reduced. Additionally, aSiC:H - coated stents exhibit a lower adhesion and activation of blood platelets and leucocytes. Finally, the release of potentially allergenic ions from a silicon carbide coated stent is substantially reduced in comparison to an uncoated metal stent ³ . This coating is used on all Biotronik coronary stents produced so far and was subject to extensive clinical testing.	The PRO-Kinetic Energy stent is available in 66 different diameter/length combinations. It is available in lengths from 8mm to 40mm. It is premounted on a delivery system which has nominal balloon diameters between 2.0mm and 5.0mm.	\$1,248.00

RH002	Kalangos Mitral Ring	KALANGOS Mitral Ring is intended for heart valve repair. Each device is characterized by a resorbable polymeric curved segment, processed in poly-1,4-dioxanone, moulded around a PVDF suture itself ended by swaged stainless steel needles. These three constituents are assembled in such a way that they cannot be shared or dismantled after assembly without irremediably destroying the device. For these reasons, KALANGOS Mitral Ring should be considered as a single device. Each extremity of the polymeric segment is terminated by a sharp end prolonged by the PVDF suture with a swaged stainless steel needle on both sides. IG002	NeuraGen	NeuraGen is a semi-permeable Type 1 collagen tube for peripheral nerve repair. It provides a protective environment and conduit for axonal regrowth across a nerve gap. It is biocompatible and completely resorbed. The open collagen structure facilitates suture placement. It has a resilient structure that maintains an open lumen throughout the process of axonal growth.	2mm x 2cm, 3mm x 2cm, 4mm x 2cm, 5mm x 2cm, 6mm x 2cm, 7mm x 2cm, 1.5mm x 3cm, 2mm x 3cm, 3mm x 3cm, 4mm x 3cm, 5mm x 3cm, 6mm x 3cm, 7mm x 3cm	\$1,250.00		
IG003	NeuraWrap	NeuraWrap nerve protector is designed to provide an interface between the nerve and the surrounding tissues. NeuraWrap remains in place during the active phase of tissue healing and is completely resorbed after tissue response has resolved. The porous outer layer of NeuraWrap comprises a tubular matrix that mechanically resists compression from surrounding tissue and excludes scar tissue ingrowth. The semi-permeable inner membrane allows passage of small molecules (ie water, ions, metabolites, nutrients) but prevents the escape of endogenous growth factors (Nerve Growth Factor). NeuraWrap provides a new alternative for the treatment of peripheral nerve injuries.	3mm x 2cm, 3mm x 4cm, 5mm x 2cm, 5mm x 4cm, 7mm x 2cm, 7mm x 4cm, 10mm x 2cm, 10mm x 4cm	\$1,250.00

OH303	ADD / ADDplus	Addplus is a winged anterior distraction device and is also used for vertebral column replacement which can be used for the anterior cervical column and for the cervico-thoracic transition. The Adplus effects the reconstruction, support and stabilization of the anterior column. The fixation on the vertebral bodies is effected by means of screws from the osmium system, with a monocortical as well as a biocortical screw anchoring being possible. The additional wings prevent a migration as well as possible sinking in of the implant. The ADDplus is made from titanium alloy. OE023	NexFix Compression Staples	The NexFix Compression Staples are made of stainless steel and are used for internal fixation of fractures, fusions, bone grafts and osteotomies in the bones of the hand and foot. It is designed so the surgeon can control the amount of compression they are applying across the osteotomy/fracture site. Once compressed the surgeon can also reduce the amount of compression applied with the specialised clamp provided. This does not affect the final stability of the implant but allows for greater control at the time of surgery.	10 mm in width, leg length varies 13 mm - 20 mm	\$300.00	\$350.00

DE302	BioComposite Corkscrew Suture Anchor	The threaded design over the entire length of the suture anchor provides substantially higher pull-out strength than comparable anchors in poor quality bone. The fully threaded design also prevents anchor "pull-back" that may occur with countersunk anchors. The internal drive mechanism substantially increases resistance to stripping during insertion into hard bone. The recessed FiberWire suture eyelet is self-aligning and minimizes suture abrasion during knot tying.	4.5mm - 5.5mm	\$435.00		
DE304	BioComposite SutureTak Suture Anchor	Absorbable suture anchor with a molded-in suture eyelet. YC001	Adiana Permanent Contraceptive System	The Adiana Permanent Contraceptive System provides permanent female sterilisation by occlusion of the fallopian tubes via a hysteroscopic transuterine approach. The Adiana Permanent Contraceptive System consists of the Adiana Radiofrequency Generator and an Adiana Delivery catheter with detachable Adiana Matrix. To provide patients with an alternative, highly safe, effective, accessible, and widely acceptable female sterilisation option, the Adiana System was developed as the next generation transcervical device. The intention was to further improve the safety profile of the transcervical device. The Adiana System can be placed in the day procedure setting without the use of general or regional anesthesia.	The Adiana Delivery Catheter and handle is approx. 58 cm in length, with an attached connector cable that is 49 cm in length. The shaft has a maximum shaft OD of 0.060 inches (+0.005in). The distal tip of the device up to the depth make, which enters the fallopian tube, has a maximum OD of 0.053 inches (1.27mm). The matrix is a cylindrical shape of approx. 1.60 mm in diameter of approx. 0.44mm is created within the centre of the matrix.	\$645.00	\$800.00
