It is implanted via the posterior approach, and allows restoration of spinal disc height and natural curvature. Nerve root decompression is also achieved by opening the neural foramen. The cages are available in several sizes with implant selection based on each individual clinical case. The device is manufactured from PEEK (ASTM F2026) and includes three radiopaque markers made of tantalum. It is indicated for use with autogenous bone graft in patients with degenerative disc disease (DDD) at one or two levels for L2 to S1, and is intended to be used with supplemental fixation.
