RG001	Aorfix AAA Flexible Stent Graft System with Aorflex Delivery Device HBB Main Body Stent Graft and HBL Contralateral Leg	The Aorfix Abdominal Aortic Aneurysm Flexible Stent Graft System is an endovascular stent graft system for treating infra-renal aortic and aorto-iliac aneurysms. When placed within the aneurysm, the Aorfix AAA Flexible Stent Graft System creates an internal bypass of the aneurysm to reduce the risk of rupture. The Aorfix AAA Flexible Stent Graft System is a modular system where each component comprises: an implantable stent graft (Aorfix Stent Graft) and a disposable delivery system. The stent graft is a two-piece system consisting of 1) a main body incorporating an ipsilateral leg component and a contralateral socket and 2) a contralateral plug-in leg. The Aorfix main body has four sets of hooks all positioned at the proximal end to aid fixation. The contralateral socket is a standard 12mm diameter component, with an oblique distal end that is designed to assist cannulation with a guidewire. Radiopaque markers made of tantalum wire rings are located at the open ends of graft components. Distal and proximal extension stent graft implants are available and may be used as required. The Aorfix System consists of a main body with an incorporated ipsilateral leg, and a contralateral plug-in leg, which attaches to the contralateral socket of the main body. The Main body and ipsilateral leg and the contralateral leg are always supplied together, creating a body and two limb system.
