The IOL is made of the proprietary hydrophobic glistening-free (GFree®) material containing a UV-blocker and additional blue blocker. The material is a hydrophobic acrylic copolymer of medical quality which includes a UV (wavelength < 400 nm) absorbing filter and a blue light-filtering chromophore which is covalently bounded to the hydrophobic material. The optical part of the test POD F GF lens is biconvex and aspherical partially compensating the positive spherical aberration of the cornea. NeuraWrap remains in place during the active phase of tissue healing and is completely resorbed after tissue response has resolved. The porous outer layer of NeuraWrap comprises a tubular matrix that mechanically resists compression from surrounding tissue and excludes scar tissue ingrowth. The semi-permeable inner membrane allows passage of small molecules (ie water, ions, metabolites, nutrients) but prevents the escape of endogenous growth factors (Nerve Growth Factor). | 3mm x 2cm, 3mm x 4cm, 5mm x 2cm, 5mm x 4cm, 7mm x 2cm, 7mm x 4cm, 10mm x 2cm, 10mm x 4cm  | 158924 |           | February 2020 |        |

The device is designed for the gradual correction of paediatric congenital as well as acquired deformities in both the upper and lower extremities, provided that the physics are not fused. The plates feature a contoured waist and low profile for paediatric usage. There is a centre hole in the plates for a temporary guide pin to be implanted to aid application and removal of the plate. The plates are attached to the external surface of the bone over the growth plate by screws.
