It is based on the science, methodology and principles of Prof Ilizarov. The circular frame is simple, offering preassembled functional components that are easy to connect and operate. The frame is stable with anti-rotational feature on connection elements that prevents any undesirable movement. Its unique wire and half pin fixation elements provide efficient bone segment stabilisation. A biomechanically superior metal-plastic interface is stable both during and between adjustments. It is based on the science, methodology and principles of Prof Ilizarov. The circular frame is simple offering pre-assembled functional components that are easy to connect and operate. The frame is stable with anti-rotational feature on connection elements that prevents any undesirable movement. It's unique wire and half pin fixation elements provide efficient bone segment stabilisation. A biomechanically superior metal-plastic interface is stable both during and between adjustments. The inner tube is attached to a spring-loaded, black knurled adjustment knob. The adjustment knob mates with the threaded rod in a manner such that the rod translates relative to the inner tube when the knob is rotated. This will provide gradual changes of overall strut length in 0.5mm increments. A reference arrow with plus sign located on the base of the adjustment knob indicates the direction of turning to perform strut elongation - distraction. Each strut has two special | Struts are available in four sizes - ultrashort, short, medium and long providing adjustment range from 45mm to 318mm. It is based on the science, methodology and principles of Prof Ilizarov. The circular frame is simple, offering preassembled functional components that are easy to connect and operate. The frame is stable with anti-rotational feature on connection elements that prevents any undesirable movement. Its unique wire and half pin fixation elements provide efficient bone segment stabilisation. A biomechanically superior metal-plastic interface is stable both during and between adjustments. Mixing the two separate sterile components produces a ductile bone cement which, after hardening, fixes the implant and transfers stresses produced during movement evenly to the bone. Simplex HV cement powder also contains insoluble zirconium dioxide as an X-ray contrast medium. Simplex HV does not emit a signal and does not pose a safety risk in a magnetic resonance environment. | There is only one size. Powder Component 40g, Liquid Component 20ml | 220884           |           | February 2020 |        |

Because of its elasticity, Geistlich Bio-Gide Shape should be used in combination with void-filling bone graft materials such as autologous bone or bone substitutes (e.g. Geistlich Bio-Oss / Geistlich Bio-Oss Collagen) whenever possible. The porous surface, facing the bone, allows the ingrowth of bone-forming cells. The dense surface, facing the soft tissue, prevents the ingrowth of fibrous tissue into the bone defect. | 14 x 24 mm                             | 287902           |           | May 2018     |        |

With sharp tips and the stable construction, the pins can be precisely inserted into cortical bones. The pins have an additional minithread and are a hybrid composed of a screw and pin. The thread makes easy and safe removal possible after a healing period has taken place. This thread enlarges the surface of the shaft at the same time and therefore offers more stability. | 3.5mm  | 280879           |           | May 2018     |             |

The Device has a radiopaque marker band at each end and a micro screw attachment at one end for attaching to the delivery wire. The AVP4 fits through a 0.038 guidewire compatible diagnostic catheter allowing the use of the same catheter throughout the procedure rather than having to exchange the diagnostic catheter for a second delivery catheter to place a plug. | 4mm 4 diameter 10.0 length<br>5mm 5 diameter 10.5 length<br>6mm 6 diameter 11.0 length<br>7mm 7 diameter 12.5 length<br>8mm 8 diameter 13.5 length | 168673 |           | February 2020 |        |

It is a ready for use, blue colored, transparent liquid. The product exhibits a polymerization effect with embolization. When in contact with living tissue and in humid environments, it rapidly polymerises by forming a thin, flexible membrane with high tension resistance that adheres firmly to the tissues.              | One size   | 283020 |           | February 2020 |        |

The SQUID Liquid Embolic System consists of a vial of SQUID, a vial of DMSO, two SQUID delivery syringes, one DMSO delivery syringe, two syringe adapters and 8 stickers to identify the vials of SQUID. A SQUID-compatible delivery micro-catheter, the use of which is indicated for the neurovascular system (Sonic, Balt catheters) is used to access the embolization site. The liner articulates with an acetabular cup and femoral head as part of a total hip arthroplasty. The liner has an inner clearance of 0.3 mm with respect to the femoral head. The outer clearance has been increased to 0.6 mm to avoid locking of the outer joint due to the interposition of fibrous tissue. The centre of the inner head is cranialized with respect to the centre of the liner (1,5 mm), to permit the self-centring of the system. | Diameter (mm)<br>Outer 42 to 58<br>Diameter (mm)<br>Inner 22 to 28 | 294065 |           | February 2020 |        |

It is implanted via the posterior approach, and allows restoration of spinal disc height and natural curvature. Nerve root decompression is also achieved by opening the neural foramen. The cages are available in several sizes with implant selection based on each individual clinical case. The device is manufactured from PEEK (ASTM F2026) and includes three radiopaque markers made of tantalum. It is indicated for use with autogenous bone graft in patients with degenerative disc disease (DDD) at one or two levels for L2 to S1, and is | Design: Convex, bullet design<br>Length: 22, 26, 30mm<br>Height: 7 - 16mm<br>Angle: 0, 4, 8° | 292041                     |           | February 2020 |        |
