OH303	ADD / ADDplus	Addplus is a winged anterior distraction device and is also used for vertebral column replacement which can be used for the anterior cervical column and for the cervico-thoracic transition. The Adplus effects the reconstruction, support and stabilization of the anterior column. The fixation on the vertebral bodies is effected by means of screws from the osmium system, with a monocortical as well as a biocortical screw anchoring being possible. The additional wings prevent a migration as well as possible sinking in of the implant. The ADDplus is made from titanium alloy.	ADDplus, diameter 12mm, height 13-18mm. 6°	\$2,155.00	\$4,500.00
