									the plate to improve receiving the malleus handle. The surface of the predefined contact points (upper side of implant plate and implant shoe) is roughened in order to facilitate better bonding to the eardrum resp. the stapes footplate. To improve the adaptation of the implant plate to the plane of the eardrum, the angle between the implant plate and shaft can be optimally adapted because the shaft below the implant plate tapers off (onwards from a total length of 3.5 mm). 									centrally (round) towards the implant shaft or eccentrically (oval). In the eccentric version (oval), an additional groove has been worked into the plate to improve receiving the malleus handle. Variable - The implant body consists of two parts, a shortenable shaft that is firmly bound to the prosthesis bell, and a prosthesis plate that has been provided with a borehole in its underside. The borehole has been dimensionally designed in such a way that it can receive the shaft after the latter has been adapted lengthwise to the respective situation in the middle

									slow or fast VT and VF by continuously monitoring atrial and ventricular activity to identify persistent ventricular arrhythmias and to deliver appropriate therapies. PLATINIUM DR 1510 features the PARAD/PARAD+ algorithm, which is specifically designed to differentiate ventricular tachycardias from fast rhythms of supraventricular origin. PARAD/PARAD+ continuously monitors R-R interval stability, searches for long cycles, assesses the degree of P-R association, evaluates sudden onset and determines the chamber of arrhythmia acceleration.
