IG002	NeuraGen	NeuraGen is a semi-permeable Type 1 collagen tube for peripheral nerve repair. It provides a protective environment and conduit for axonal regrowth across a nerve gap. It is biocompatible and completely resorbed. The open collagen structure facilitates suture placement. It has a resilient structure that maintains an open lumen throughout the process of axonal growth.	2mm x 2cm, 3mm x 2cm, 4mm x 2cm, 5mm x 2cm, 6mm x 2cm, 7mm x 2cm, 1.5mm x 3cm, 2mm x 3cm, 3mm x 3cm, 4mm x 3cm, 5mm x 3cm, 6mm x 3cm, 7mm x 3cm	$1,500.00		
IG003	NeuraWrap	NeuraWrap nerve protector is designed to provide an interface between the nerve and the surrounding tissues. NeuraWrap remains in place during the active phase of tissue healing and is completely resorbed after tissue response has resolved. The porous outer layer of NeuraWrap comprises a tubular matrix that mechanically resists compression from surrounding tissue and excludes scar tissue ingrowth. The semi-permeable inner membrane allows passage of small molecules (ie water, ions, metabolites, nutrients) but prevents the escape of endogenous growth factors (Nerve Growth Factor). NeuraWrap provides a new alternative for the treatment of peripheral nerve injuries.	3mm x 2cm, 3mm x 4cm, 5mm x 2cm, 5mm x 4cm, 7mm x 2cm, 7mm x 4cm, 10mm x 2cm, 10mm x 4cm	$1,500.00

HW567	Neuroform ATLAS Stent System	The Neuroform Atlas (Atlas) Stent System is intended to be used for stent assisted embolization for intracranial aneurysm therapy. The purpose of the stent is to retain the occlusive devices within the aneurysm. Occlusive devices can be delivered prior to stent placement or after stent placement. The Atlas Stent System consists of a self-expanding, sterile, nitinol stent preloaded over a delivery wire inside an introducer sheath. The sheath and delivery wire are used to transfer the stent into a 0.0165 to 0.017 inch internal diameter microcatheter. After transferring the stent, the sheath is removed from the proximal end of the delivery wire. The delivery wire is then used to advance the stent to the distal end of the microcatheter. The microcatheter and stent system are repositioned as a unit to ensure the stent is located across the aneurysm. The stent is deployed by stabilizing the delivery wire and withdrawing the microcatheter. The Neuroform Atlas stent cannot be repositioned or captured once deployed. The compression screws are self-tapping cannulated screws, which present two types of thread diameter (one on the screw head and a body part of the screw). They are particularly intended to repair the 1st metatarsal in the foot. The pitch difference between the proximal and the distal part allows creating a compression are between the upper and lower bone fragment of 1st metatarsal improving the healing process.	10 sizes Head diameter: 3.8mm Proximal diameter: 3mm Internal diameter: 1.10mm Different length from 10mm to 34mm by pitch of 2mm between each reference	$421.00

DE302	BioComposite Corkscrew Suture Anchor	The threaded design over the entire length of the suture anchor provides substantially higher pull-out strength than comparable anchors in poor quality bone. The fully threaded design also prevents anchor "pull-back" that may occur with countersunk anchors. The internal drive mechanism substantially increases resistance to stripping during insertion into hard bone. The recessed FiberWire suture eyelet is self-aligning and minimizes suture abrasion during knot tying.	4.5mm - 5.5mm	$527.00		
DE306	BioComposite SwiveLock	The SwiveLock is a 4.75 or 5.5mm twist-in knotless anchor. This anchor functions very similar to the PushLock but with a twist-in design. This anchor is available with a b-TCP and PLLA anchor body and PEEK eyelet.	4.75mm - 5.5mm	$527.00

ER301	LIGASTIC reinforcement ligament	The LIGASTIC reinforcement artificial ligament is to constitute a reinforcement or support during healing & repair of the Patellar tendon, achilles tendon, antero lateral laxity of ankle, medial collateral ligament and posterior cruciate ligament. There are different products for the reinforcement of the collateral ligaments, anterior cruciate ligament, achilles tendon, shoulder, patella tendon, popliteal tendon, ankle anterior-lateral laxity and acromial-clavicular dislocation. The product consists of warp-knitted fibres of PET. It is knitted in bands of 8, 15, 18, 22, 36 or 72 warp threads. The basic structure of LIGASTIC is always identical. However, the presentation varies depending on the actual joint affected. The ligaments presented are: - cylindrical string, with variable length & diameter. Diameter varies according to fiber content & required resistance. Both ends of the ligament are soft, formed as a reinforced loop, allowing an easy passage through the bone tunnels. These ends have a temporary function & are able to be cut off after the tunnel passage. - band, for reinforcement of a flat anatomical structure such as the medial collateral ligament in the knee - reinforcement ligament (uncoated LIGASTIC) - for support and healing of intra-articular or extra-articular natural ligaments	7 sizes: LCA60NEF: 30 threads, length 300mm, diameter 6mm LT60:30 threads, length 290mm, width 6 or 8.8mm RTF22: 11 threads, length 360mm, width 8mm RTF18: 9 threads, length 360mm, width 7mm LCP88NE: 22 threads, length 550mm, width 5.5mm LLI30: 15 threads, length 350mm, width 22.5mm L30: 15 threads, length 360mm, diameter 4.5mm LT60: 30 threads, length 290mm, width 8.8mm	$4,439.00		That an Artificial Ligament should only be funded for intra-articular cases where no non-synthetic graft sources (allografts and autografts) are available.

RG001	Aorfix AAA Flexible Stent Graft System with Aorflex Delivery Device HBB Main Body Stent Graft and HBL Contralateral Leg	The Lombard Medical bifurcated stent-graft system (Aorfix) is used to treat aortic, aorto-iliac and iliac aneurysms. The device is supplied in its delivery system. Aorfix stent graft is a two-part modular implant comprising a bifurcated main body section and a straight contralateral limb section (the "plug-in"). The main body section bifurcates into a full-length ipsilateral iliac section and a contralateral short leg mating section (the "socket"). The plug-in is mated intraoperatively to the socket to form the complete bifurcated system. Each of the two components is supplied pre-loaded into a delivery system comprising a catheter with built-in deployment handle. The catheter for the main body section has a hydrophilic coating on its outer surface. The self-expanding implant is fabricated from nitinol (an alloy of nickel and titanium) and a woven polyester fabric (synthetic textile). Proximal hooks, also fabricated from nitinol, are provided in the main body section to resist migration. RG002	Aorfix AAA Flexible Stent Graft System with Aorflex Delivery Device HBC Helical Converter	The Lombard Medical bifurcated stent-graft system (Aorfix) is used to treat aortic, aorto-iliac and iliac aneurysms. Standard techniques for the use of vascular access sheaths, angiography, guidewires and contrast media should be employed.The device is supplied in its delivery system, sterilised by means of ethylene oxide (EtO). It is packaged in peel-open pouches. Aorfix stent graft is a two-part modular implant comprising a bifurcated main body section and a straight contralateral limb section (the "plug-in"). The main body section bifurcates into a full-length ipsilateral iliac section and a contralateral short leg mating section (the "socket"). The plug-in is mated intraoperatively to the socket to form the complete bifurcated system. Each of the two components is supplied pre-loaded into a delivery system comprising a catheter with built-in deployment handle. The catheter for the main body section has a hydrophilic coating on its outer surface. The self-expanding implant is fabricated from nitinol (an alloy of nickel and titanium) and a woven polyester fabric (synthetic textile). Proximal hooks, also fabricated from nitinol, are provided in the main body section to resist migration. Converters are used after implantation of the bifurcated body, if implantation of the contralateral limb proves impossible. The system converts the bifurcated main body into an aorto uni-iliac stent graft. If revising to a mono-iliac approach, use a femero-femoral cross-over graft to perfuse the contralateral side and occlude the contralateral common iliac artery. The converter delivery system is identical to the body delivery system.	SG-HBC-D6-A12-22, where: D6(mm): 25, 27, 29, 31	$3,308.00

DE387	C-Plate - Fixed and Variable Screws	C-Plate Anterior Cervical Plates are inserted via an anterior approach to the cervical spine, in order to fix one or two levels of vertebrae together. Such fixation is performed to cause bony fusion between the levels and is done in order to address pain, instability, and/or a range of other indications. The C-Plate system consists of low-profile (1.6mm thick) pre-contoured plates of varying sizes and a full range of screws. The plates themselves contain an innovative screw-loking mechanism utlising an elastic locking ring which allows the surgeon choice between semi-fixed or variable-angle self-tapping screws. EV024	NAJA ligament correction system	NAJA is dedicated to the correction and stabilization of the spine during fusion of the instrumented levels. It consists of: - A braid allowing correction and stabilization of the levels, after tensioning - A malleable lamella allowing guidance of the braid during surgery and attached to the braid through a shrink sleeve. These parts are not intended to a long term implantation - A connector designed to be fixed on a rod and holding the tension on the braid. Because of its conception, and in order to obtain symmetric constructions, two versions are available of the implant: one for the left size, one for the right side.	5.5mm diameter, left side and right side.	$820.00

Such fixation is performed to cause bony fusion between levels and is done in order to address pain, instability, and/or a range of other indications. The C-Plate System consists of low-profile (1.6mm thick) pre-contoured plates of varying sizes and a full range of screws. The plates themselves contain an innovative screw-locking mechanism utilising an elastic locking ring which allows the surgeon choice between semi-fixed or variable-angle self-tapping screws. DE377	ROI-T TLIF Cage	ROI-T is a TLIF (Transforaminal Lumbar Interbody Fusion) interbody fusion cage manufactured from PPEK-Optima, designed for ease of insertion and graft maximisation. The transforaminal approach allows for exposure of the disc space by removing the facet joints and protecting the nerve roots. The disc space is entered and disc material is removed. The ROI-T cage is filled with bone graft material and is placed into the cage space to maintain the disc height and impart additional stability to the construct. Note that ROI-T cages must be used in conjunction with a posterior screw and rod system to properly stabilise the segments and enable fusion to occur.	Lordotic angles 0, 5 and 9 degrees. Length 30mm. NV131	Foundation LL (Cage)	The Foundation LL System is indicated for spinal fusion procedures in skeletally mature patients with degenerative disc disease (DOD) at one or two contiguous levels in the lumbar spine (L2 to S1). DOD is defined as back pain of discogenic origin with degeneration of the disc confirmed by patient history and radiographic studies. DOD patients may also have up to Grade 1 spondylolisthesis or retrolisthesis at the involved levels. These patients may have had a previous non-fusion spinal surgery at the involved level(s). The Foundation LL System is intended for use with autograft. The Foundation LL System 10-20 degree lordotic cages may be used as a standalone system. The Foundation LL System 25-30 degree lordotic cages must be used with supplemental internal spinal fixation systems (i.e. , posterior pedicle screw and rod system) that are cleared by the FDA for use in the lumbar spine. Patients must have undergone a regimen of at least six (6) months of non-operative treatment prior to being treated with the Foundation LL System.	6-12mm tall, 34-38mm wide, 24-28mm deep and 0-30 degree lordosis	$3,600.00
